1 Locating your Diagnostic port

Your Diagnostic port can be located in various locations in and around the driver side. The most common location are found in points 1,2,3.

Other mount locations that are used are points 5,7,8 & 9 just behind the center console.

1.1 GPS Antenna

The FTXW has a High-performance GPS antenna integrated.

The recommended Install is indicated by the arrow. The arrow should face the Sky for best performance.

1.2 Best Practices

- Always connect the FTXW while the Ignition is turned OFF to ensure optimal functionality of the modem
- Leave FTXW plugged in with Ignition turned OFF for a minimum of 2 minutes, this gives the modem some time to properly connect to the computer of the vehicle
- For ECM and Bluetooth, leave the device connected with Ignition turned ON for at least 5 minutes to allow for device to pick up its settings from cloud and make a successful connection to ECM

- Do not mount the device against extremely hot areas under the dash
- Ensure the diagnostic port of the vehicle is not corroded or damaged. Look out for frayed wires behind the diagnostic port

2 LED Light Indicator

	GPS	Cellular	Bluetooth	Wi-Fi
LED Color	Green	Amber	Blue	Purple
Off	GPS off	Modem off	Bluetooth off	Wi-Fi off
On	GPS Fix	Modem on, and connected to network	Bluetooth on	Wi-Fi on
Medium Flashing	Searching for satellites	Searching for cell network	N/A	N/A
Fast Flashing	Receiving GPS location	Transferring cellular data	N/A	N/A

LED	Color	Flash (Slow) Count	Error
Cellular	Amber	1	SIM Error
		2	No network
		3	Unable to register with network
		4	Battery too low to transmit
		5	Service activation error
		5	Service sync failure
GPS	Green	5	GPS No Fix

Sympton

LED slow flashes in a repeated pattern

Action

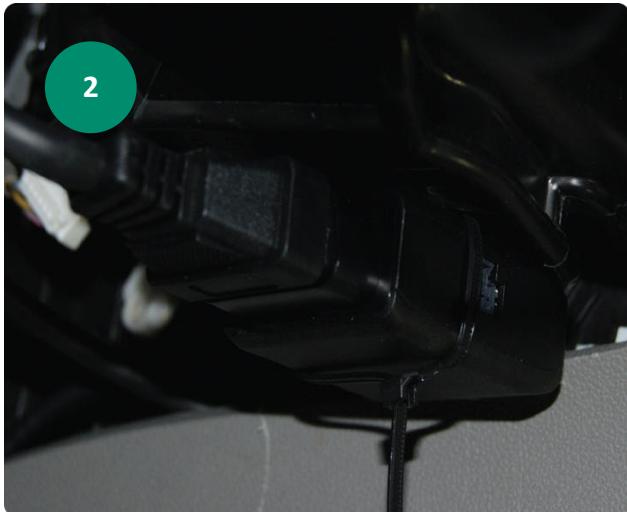

The device is in error state: check the error codes above for corresponding actions

3 Installation

Connect the device to your OBD Y cable, this assumes the OBD Y male end is connected to the Diagnostic port of the vehicle. Look for a Red LED as an indicator of power.

2

Secure the device using Zip ties preferably up underneath the dash. Ensure the device is not obstructed by any metal.

Ensure device is secure so that there is little to no wiggle room.

4 Cables

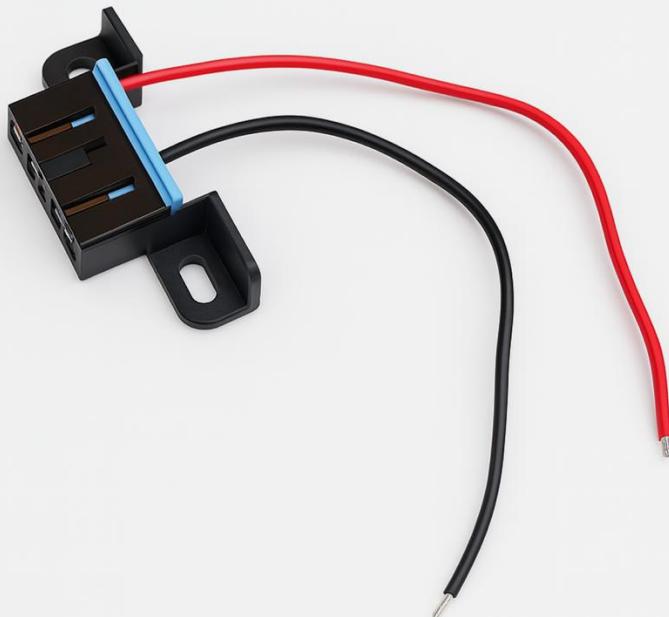

OBD Y Cable

The OBD Y cable is used for covert installations.

9PIN Y OBD

9 PIN Y cable is used to complete covert installs.

OBD Hardwire Adapter

OBD Hardwire adapter is used to hardwire your device using a two wire install constant power (red) and ground (black).

6 to 9 PIN Adapter

The 6 to 9 pin adapter is used to complete the installation of older type heavy duty vehicles that have 6 PIN Diagnostic ports.

TTL Cable

The TTL cable is used to install inputs such as PTO's, temperature sensors etc. The molex end connects to the side of your FTXW.

4.1 6 to 9 PIN Adapter

Pin at Board Side	Pin Definition	Color
1	Ground	Black
2	Output 1 (Ground to close) (-)	Orange
3	BMCU_UART4_RX(TTL 1.8v)	Green
4	BMCU_UART4_TX(TTL 1.8v)	White
5	BDCDC 5V output	Pink
6	1-Wire_line	Yellow/Red
7	Input 1 (Ground to close (-)	Grey
8	Output 2 (Ground to Close (-)	White/Blue
